PACKAGING FOR INDUSTRIAL AND CONSUMER GOODS

Functionality and long service life are the required attributes for industrial packaging. Further important factors are process optimisation, long-term outdoor storage, printability, high grade antistatic and increased wear & tear. The GABRIEL-CHEMIE Group offers you a large choice of additive- and colour masterbatches which meet these demanding expectations and requirements.

COMPETENCE IS OUR STRENGTH

Our product solutions not only optimise your processes, they also improve the end product itself. Our years of expertise enable us to realise your innovative packaging ideas. Customer-specific additive packages and attractive colour recipes are our strength. Single sourced solutions are thereby guaranteed.

APPLICATIONS

THIN-WALL PACKAGING

Our masterbatches offer you the best balance between coverage, weather-resistance, dispersability and process optimisation. Single additive components are available as well as combination with colour.

THICK-WALL PACKAGING

Whether injection-moulded, blow-moulded or thermoformed - with our products you always get the right results.
